

Are You Gambling With Your Business?

You've built a career around helping people protect what is most important to them...their families, their homes, and their assets.

Shouldn't you make sure your most critical business asset – your critical data – is also protected? With [Gatekeeper's](#) ultra-secure, encrypted data backup service, you can have that peace of mind.

What would you do if all of your business data were wiped out today? Could you recover?

Hard drives fail. Servers crash. Data gets corrupted. Laptops get stolen. Tornados, hurricanes, floods, power surges, lightning strikes, burst pipes, fire, malicious deletion...all of these things could destroy the data that represents years of work for you. If you lost that data today, could you survive?

On-site back-ups are the first step in data protection, but can be compromised or destroyed by any of those disasters above and leave you unable to operate your business.

[Gatekeeper](#) offers multiple protection options for your data, from offsite back-up using [military grade encryption](#), to an on-site BDR (Back-up and Disaster Recovery Appliance) for larger data sets, able to take a complete image of your entire server as often as every fifteen minutes and, in the case of a primary server failure, be virtualized in minutes to maintain business operations.

The system is fully automated, ultra-secure, affordable (with plans starting as low as \$50/month) and best of all, gives you the peace of mind of knowing that, no matter what disaster strikes your hardware, your business-critical data is secure at one of Gatekeeper's data centers.

Don't roll the dice with your business...leave the gambling in Vegas and secure your data today with one of Gatekeeper's very affordable data protection plans. It may be the decision that saves your business. [Contact us](#) today for a quote.
